

## **CLOUD DA – 2**

### **Hosting a Wordpress Website on InfinityFree.**

**Name:** Rohit Singh

**Registration Number:** 23MCA0163

**Website URL:** <https://cutyourfat.free.nf/>

**Tools used:** Wordpress for making website & InfinityFree is used for hosting the Website. The website is made directly on the cloud without any localhost.

#### **Why InfinityFree Hosting?**

I chose this hosting although we have plenty of options available for free hosting because this provides you with SSL (Secure Socket Layer) certification for websites hosted on their platform. This feature enhances the security and trustworthiness of your website.

**Step1:** Go to [www.infinityfree.com/](http://www.infinityfree.com/) and get yourself registered.

## Step2: Login to your account.

### Login to your account

Email Address

Password [I forgot my password](#)

☐ Keep me logged in

[Sign in](#)

Don't have account yet? [Sign up](#)

## Step3: Create an account for hosting a website. This step helps you if you want to host multiple websites then you can create multiple accounts.

**Step4: Choose your Subdomain and the domain extension which are available for free. You can also select custom domain, but it will charge you for it so better go for free subdomain.**

**New Hosting Account: Domain Name**

1 Hosting Plan      2 **Domain Name**      3 Additional Information      4 Done

**Step 2: Domain Name**

**Domain Type**

**Subdomain**

**Domain Extension**

You can add more domains after your account has been created.

[< Back](#) [Check Availability](#)

**Step5: The status will then change to active, and you will see a simple webpage when you visit your URL.**

**Manage if0\_35537317**

**Step8: Now if you go visit your website it will show not a secure connection and to rectify this, we need SSL (Secure Socket Layer) Certificate and we can apply for this.**

**Go to free SSL certificates and click on new SSL certificate.**

**InfinityFree** [Go Premium](#) [rohitrsn005@gmail.com](#)

**Don't like manual installation?**

iFastNet's Premium Hosting integrates Let's Encrypt directly into the cPanel control panel, so your free SSL certificates can be created, installed and renewed fully automatically!

[Learn more about this and the other benefits of Premium Hosting from iFastNet!](#)

**Step9: Fill in your domain name and click on create order.**

The screenshot shows the InfinityFree website interface. At the top, there's a navigation bar with links: Home, Profile, Accounts, Free SSL Certificates (active), Site Builders, Domain Checker, Knowledge Base, and Community Forum. A 'Go Premium' button and a user profile icon with the email 'rohitrsn005@gmail.com' are also visible. Below the navigation bar, the page title is 'FREE SSL CERTIFICATES / REQUEST CERTIFICATE' and the main heading is 'Order new Free SSL Certificate'. The form contains a text input field for 'Domain Name' with 'example.com' entered. Below the input field, there are two lines of text: 'The www. subdomain is automatically included.' and 'The www. subdomain is automatically included.' There is a link for 'Advanced Options' and a 'Back' button at the bottom left. A purple button with a plus sign and 'Create Order' is at the bottom right.

**Step10: You can follow the necessary steps and wait for around half an hour and then you will be provided with SSL certificate and now you will be able to visit your website with your URL.**

The screenshot shows a 'Step 5: Verify Installation' section. It contains a paragraph: 'This is the SSL certificate that's actually active on your site. If the domain is hosted elsewhere, it will show the certificate that's active at that provider. Please note that this information is cached, it may take a few minutes for changes to be visible.' Below this is a table with the following data:

Domain	cutyourfat.free.nf
Status	SSL certificate is installed
Issuer	Google Trust Services LLC
Expires at	2024-02-29

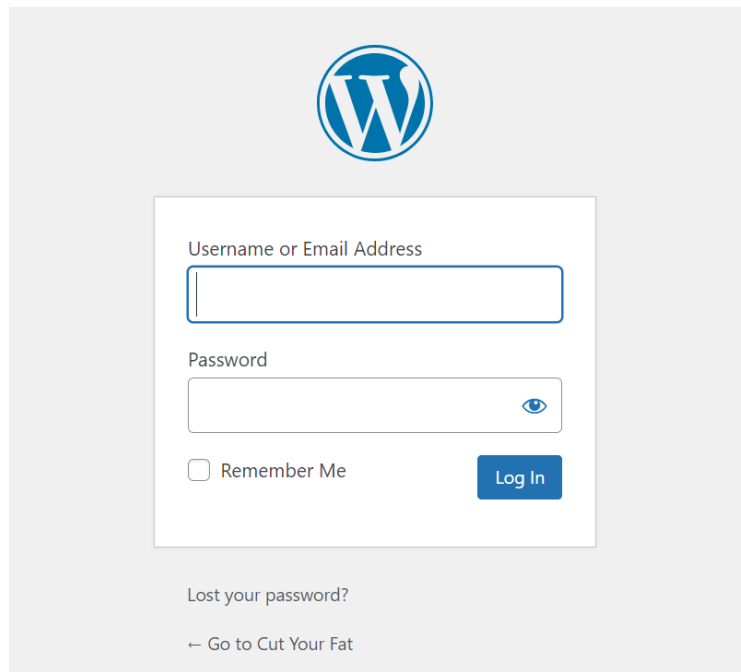

Below the table is a 'Step 6: Make your website use HTTPS' section. It contains a paragraph: 'Is your SSL certificate installed successfully? Then you will want to do the following to start using it:' followed by two numbered steps:

1. **Make sure all URLs use HTTPS.** You can do this by opening your website with HTTPS and making sure you see a green lock in your address bar.
2. **Force all visitors to use HTTPS.** You can read more about that in our [knowledge base](#).

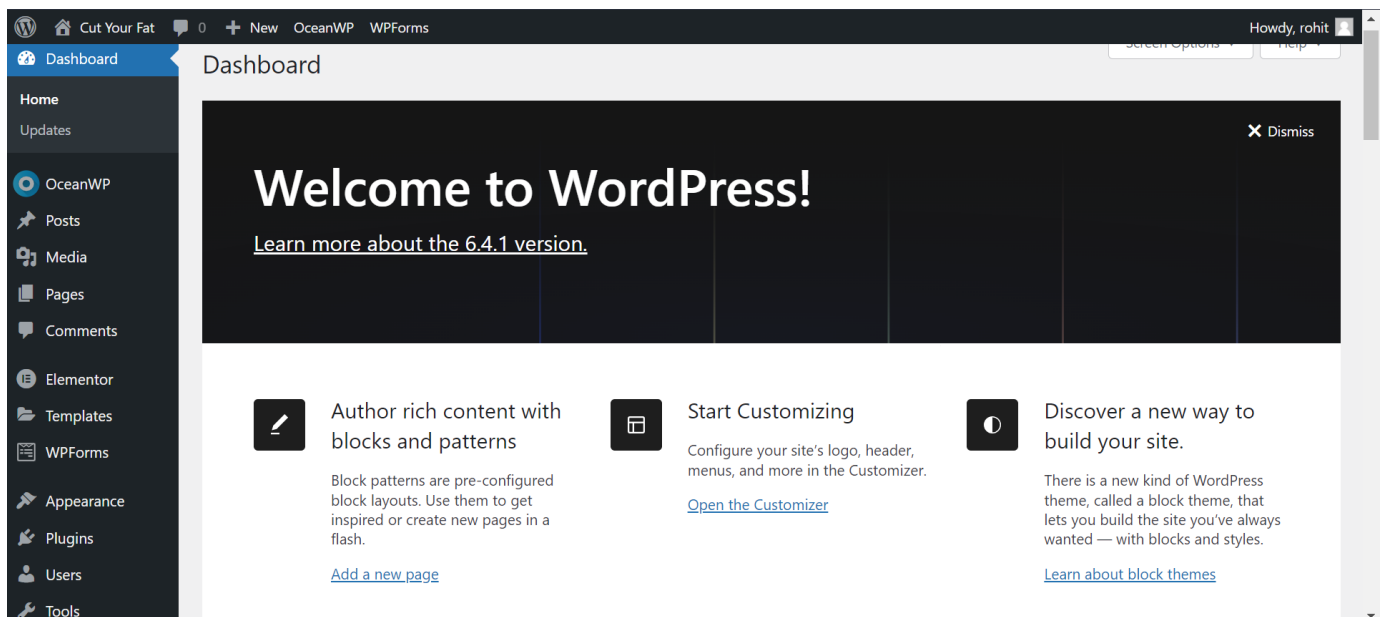

**Step11: Now log in to your Wordpress Dashboard by clicking this link: [cutyourfat.free.nf/wp-admin](https://cutyourfat.free.nf/wp-admin)**

Basically, this link is your domain name followed by wp-admin.

Fill in your Credentials and you will be redirected to your wordpress dashboard.

This is how your Wordpress Dashboard will look like:

**Step12: Now you can create your own website by installing new themes and plugins in wordpress and the changes will be saved to your website dynamically.**

**This is the final website:**
